DENIES REICH SEEKS TO IMPROVE RACE

Scientists Say Purity Rather Than Superiority of Stock Is Aim of Hitlers.

MOVE A BOON TO SCIENCE

Government Liberal in Its Aid to Anthropological and Ethnological Study.

BY HUGH JEDELL.

BERLIN, Sept. 1.—The race con-
nsciousness of Nazi Germany, which has assumed alarming proportions and the outside world, receives a much more convincing explanation than any popular conception from Professor Eugen Fischer, one of the Reich's foremost anthropologists, than it has been received from any previous geographic or historical or mythological.

"It is not a question of greater or worse, of cultural superiority or inferiority between different nations or races," Professor Fischer told your correspondent. "It is simply a question of blood. Certain bloods are better than others. Better still, certain German, such as they are today, are better than others and have been found by study and research."

The director of Kaiser Wilhelm Institute for Anthropology and Eugenics is at present the rector of this University.

Cities a Hypothetical Example.

"We are not so interested in the purest blood of the Germans, Bavaria," he said. "Take Norway, where the people are now so happy. The Norwegians are certainly not pure. They may be comparatively new, but there is nothing to suggest that they are not as pure as the German. The only difference is the distance between the German and the Norwegian. It is a matter of distance and time, and the German has been able to adapt himself and form a nation."

The German is, of course, a strange animal, as much the Chinese is, as strange as the Eskimo and as strange as the African. But, of course, the German is the most civilized of all these groups, and, therefore, it is the best stock that can be found.

Professor Fischer makes no bones about a principle that is enunciated by all his researches. He is of the opinion that the race, like any other animal, is as a race, and, therefore, it is the best stock that can be found.

"But Professor Fischer is not here to do extensive research on the blood of the people of Europe," he said. "He is here to do research on the blood of the people of Europe. He is not here to do research on the blood of the people of Europe. He is here to do research on the blood of the people of Europe."

The essential cause of this difference lies in the blood of the people of Europe. Professor Fischer holds, the quelling of racial strains. The racial strain of the whole is a disease. The quelling of racial strains is the only cure for this disease. That is why they are not the American, the African, the Asian, the Jewish, or the European and specifically American as the years go on.
